

Blue By Design

Liquid Aquatic Dye

Blue By Design Aquatic dye transforms water to a natural blue colour. Adding a dye to your pond or lake can turn ugly water into a pleasant blue colour. Not only does it create an aesthetically pleasing body of water, it shades the water, reducing UV light penetration. The reduced light penetration provides control over algae growth, plus aids in protecting fish and other aquatic inhabitants from poaching by predatory birds.

- Super concentration provides a significant advantage over using Powdered Dyes.
- HIGHLY concentrated 1L bottle treats 5-6megL of water (1L per surface acre of water @ 1.2 - 1.5m water depth).
- Low cost
- Safe, non-toxic, long lasting
- Controls algae blooms by shading UV light penetration.
- Bird blocking formula prevents fish poaching.
- Ideal for Aquaculture ponds, lakes & even decorative features.
- Bulk pricing available.
